

Online50: A 100% in-Cloud fully managed alternative to Sage Drive

Fully Managed Hosted System

The Online50 service is fully in-Cloud running out of our two UK data centres on equipment that we own and manage ourselves. In the event of any problems our SLA is based around a 7 minute planned recovery.

Fully Authorised by Sage

Online50 are authorised to provide access to Sage software under monthly payment terms. Users have the flexibility to change their rented software license to meet changing needs. Users with a qualifying license (version 2009 onwards) may have their own license hosted.

Fully Featured Software

Online50 provides standard, unaltered Sage software. The aim is to have the software behave in the same way as it does when installed on a user's Windows computer.

Monthly Contracts

Users subscribe on a calendar monthly basis and can give notice at any time to reduce or cease service at the end of the following calendar month.

Flexible Packages

Users can also subscribe to Microsoft Office, Sage Payroll and a broad range of Sage Additions for a complete hosted service. Individual users in the same company can access different software if required.

Online50 is a good choice when:

-  You have a large amount of updates generated in your remote locations
-  You don't want your remote locations to depend on the availability of the centre
-  You want a fully managed solution designed around a 7 minute recovery target
-  You want a system that's been proven over more than a decade of continuous operation
-  You want to keep using the software you know and like from a supplier you can trust
-  You want to use non-Windows systems (e.g.: Mac, iPad, Android or Chromebook)
